Revision: F Date: January 15, 1999

Approved by: *Rick Landers*

### TITLE: Supplier Identification Requirements

**PURPOSE:** To establish supplier traceability of piece parts manufactured for Unison products.

- 1.0 Piece parts that require permanent part number identification must also contain a supplier identification code. If the identification code is placed on the same line as the part number, a space approximately equivalent to two letters and no dash should be allowed between the part number and the identification code.
- 2.0 In the event that supplier identification is required on a part which does not require a part number, mark the code per AS-478, "Identification Marking Methods". When height of the code is not specified, 1/16" high marking will be used.
- 3.0 Supplier identification codes are available upon request from Unison Supplier Quality.
