Dear Suppliers and Service Providers,

Unison requires that all suppliers and service providers protect the intellect property associated with Unison product. Unison migrated to NetInspect, an electronic system for technical data shall be used for submission of documents containing technical data including but not limited to Supplier Requests (SRs), FAIs, and PPAPs. Your organization is required to submit any part qualification through NetInspect effective January 1, 2025.

Digital Thread Data Distribution (DTDD) and/or fax is no longer a valid method for PPAP and FAI submission.

If you do not have access to the Unison accounts of NetInspect, please contact NetInspect via email helpdesk@net-inspect.com or by phone at (425) 233-6176. Please ensure your organization is set up for access to Jacksonville, Norwich, and Saltillo accounts. If you also supply product to our Unison TDI site located in Dayton, OH, please make sure access is given to that NetInspect account as well.

If your organization needs additional training or refresher training, there are training session videos and presentations on the homepage of each of the Unison NetInspect accounts under the "Implementation Guide".

Click the "Unison – Jacksonville" or "Unison- Norwich" drop down bar and scroll down for the training video link or training packet.

When submitting the FAIs and PPAPs, please ensure the appropriate quality Representative is named as the Unison customer package owner.

Unison Quality Directives can still be accessed at the [Unison Quality website](#) > Additional Resources > Downloads > Supplier Quality Requirements.

The supplier shall not ship product unless there is an electronic PPAP or FAI approval for the part number in the NetInspect PPAP or FAI submission.

Thank you for your support.

Sincerely,
Unison Supplier Quality Leadership
